EDUCATION

Vasireddy Venkatadri Institute of Technology (VVIT)

Oct 2022 – May 2026

B.Tech in Computer Science and Engineering – CGPA: 8.5 / 10.0

Chaitanya Jr College

Jun 2020 – Apr 2022

Intermediate (MPC) – Percentage: 92%

TECHNICAL SKILLS

Languages: Java, Python, JavaScript

Frontend: React.js, HTML5, CSS3

Backend & Systems: Spring Boot, Node.js, Express.js, REST APIs, Microservices, System Design(Basics)

Databases & Testing: PostgreSQL (SQL), MongoDB (NoSQL), JUnit

Cloud & DevOps: AWS (EC2, S3 basics), Docker, Git, GitHub Actions (CI/CD)

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

EXPERIENCE

Software Engineer Intern

Feb 2025 – May 2025

AscendSkills

Remote

- Shipped production Node.js/Express REST API changes handling HTTP request/response flows, going through code review before merge, and cutting average response latency 30% via compound indexing and connection pooling on MongoDB.
- Added schema-level request validation and structured error handling across 8 endpoints, and introduced versioned (/v1) routing to ship changes without breaking client integrations.
- Configured GitHub Actions CI to run lint and build checks on every pull request, collaborated with engineering mentors through code review feedback to catch integration issues before merge, and worked within an Agile workflow with sprint planning and stand-ups.

PROJECTS

Veltrix | *Java, Spring Boot, PostgreSQL, Kafka, Redis* | [GitHub](#)

Jan 2026 - Apr 2026

- Split into 5 services (Auth, Product, Order, Payment, Notification) — made payments idempotent so retries can't double-charge.
- Cached auth checks in Redis to cut repeated DB calls, and added circuit breakers so one service failing doesn't take down the rest.

IntelliPDF | *React, Python, FastAPI, LLM, RAG, Docker* | [GitHub](#)

Jul 2025 - Oct 2025

- Built a hybrid summarizer that pulls key sections out of a PDF before an LLM condenses them, turning a 100-page document into a 1-minute recap.
- Integrated Google Gemini for Q&A on extracted content and optimized the Docker image below 2GB, processing 100+ page PDFs in under 60s without a GPU.

Alumni Engagement Platform | *React, Node.js, Express, MongoDB, Redis* | [GitHub](#) | [Live](#)

Sep 2024 - Feb 2025

- Built a platform connecting students and alumni across jobs, events, and mentorship, one login, three modules, instead of juggling separate group chats and spreadsheets.
- Secured it with JWT auth and hashed passwords, and indexed the database so listings and searches stay fast as more students join — now used by 70+ students at my college.

OPEN SOURCE

ApostropheCMS | *JavaScript, Node.js* | [PR #5448](#) — merged

Jun 2026

- Diagnosed and fixed a static asset URL bug in a production open-source CMS under URL-prefixed deployments, added test coverage via a regression test, and incorporated maintainer code review feedback before merge.

ACHIEVEMENTS

- **Finalist, Adobe India Hackathon 2025 (National Level):** Advanced from 400,000+ participants to the top 100 finalist teams nationally.
- **1st Place, VVIT Internal Hackathon:** Led a 4-person team to build and demo a working prototype in 24 hours among 150+ competing teams.
- **600+ problems solved** across LeetCode, GeeksforGeeks, CodeChef, and HackerRank, with focused practice in Dynamic Programming, Graph traversal (DFS/BFS), and Backtracking.
